

# Golden Tower

Jeddah, KSA

A high-end residential tower sitting in a prominent position on the Jeddah cornice

Golden Tower will bring to life a true destination development with high quality façade solutions for this new and desirable place to live.

This residential development will feature modern and cost-effective architecture. The façade features a glazed curtain wall façade with vision glass, frit glass and stone panels and shall have high-quality interfacing.

The feature areas contain large bi-folding windows at the balcony balustrades to allow the residents to close the windows and enlarge their living spaces during the warmer months and still take advantage of the views of the Jeddah cornice.

The height is 49 floors; including 1 basement, ground, 3 podium floors, 1 technical floor, 2 refuge floors and one roof technical floor.

The development features “green pockets” of landscaped terraces to create outdoor spaces for the building’s residents.

The BMU system is a tower unit that provides quick and efficient access for cleaning and maintaining the façade.
